INTRODUCTION

A living wage is the hourly rate a worker needs to earn to meet basic needs, live with dignity, and maintain a decent quality of life. New Brunswick's living wages are calculated based on real-life and real-time costs of living and raising a family in the province. These calculations use a reference family household with full-time working parents and two children, aged 2 and 7. A living wage ensures the family can avoid severe financial stress, support healthy child development, and fully participate in their communities.

A living wage is not a minimum wage, which the government legislates as the minimum employers must pay their workers.

A living wage is not a guaranteed annual income, which is a redistributive grant paid for via general tax revenue and most effectively administered by a national or federal government.

Living wage calculations are updated annually to reflect changes in the cost of living, as well as adjustments to government transfers and deductions. Since we began calculating living wages in 2018, rates in New Brunswick have risen each year due to increasing living costs.

Shelter costs saw the largest increase this year, driving much of the overall rise in the living wage. At the same time, higher employment income reduced the amount of government transfers the family received, which also pushed the wage upward.

This year's report includes a province-wide living wage of \$24.77 per hour, along with rates for the province's major cities: Fredericton at \$26.05, Saint John at \$24.49, and Moncton at \$24.43.

New Brunswick does not have a dominant urban area. Therefore, data availability can be sparse, especially for geographies outside of Moncton, Saint John, and Fredericton. There is sufficient data to calculate living wages for these principal cities, but that is not the case for less populated areas of the province.

The provincial living wage rate represents the average cost of living across New Brunswick. Where available, provincial-level data was used in the budget calculations. In cases where such data was unavailable, weighted averages from New Brunswick's three principal cities were used as a representative estimate.

A provincial living wage is a powerful advocacy tool, especially since the minimum wage is set at the provincial level. It provides a clear benchmark for what it actually costs to achieve a decent standard of living, which is something the minimum wage fails to reflect. In New Brunswick, the gap between the minimum wage and the living wage is \$9.12, and almost half of all workers earn less than a living wage. [1] Establishing a province-wide rate simplifies the process for employers committed to paying fair and adequate wages.

New Brunswick has the third-lowest minimum wage in Canada, currently set at \$15.65.[2] While the rate increased by 35 cents in April 2025, this adjustment simply kept pace with inflation. It did not improve workers' real purchasing power. The persistent gap between the minimum wage and the living wage highlights that the minimum wage remains insufficient.

Earning minimum wage often means living in poverty, leaving workers unable to meet basic needs or save for the future. Many are forced to make impossible choices, such as whether to buy groceries, heat their homes, or pay rent on time. These trade-offs can lead to food and housing insecurity, unmanageable debt, increased stress, and long-term health issues. This report urges employers to support worker well-being by committing to pay a living wage.

2025 LIVING WAGES

METHODOLOGY

Living wages in New Brunswick are calculated using the Canadian Living Wage Framework, which helps to provide a consistent, evidence-based approach. The framework defines a living wage as “the hourly rate at which a household can meet its basic needs, once government transfers have been added to the family’s income...and deductions have been subtracted.”[3]

Government transfers include federal and provincial benefits like the Canada Child Benefit, New Brunswick Working Income Supplement, Canada Carbon Rebate (ended in April 2025), and the Goods and Services Tax/Harmonized Sales Tax (GST/HST) credit. Deductions refer to mandatory contributions and taxes, including Employment Insurance Premiums, Canada Pension Plan contributions, and federal and provincial income taxes.

The designated living wage in a community represents the hourly rate each working adult in a household must earn to cover essential monthly expenses and live above the poverty line. The Canadian Living Wage Framework uses a reference family of four: two full-time working parents (35 hours per week each) and two children, aged 2 and 7.

To reflect real-life circumstances, the model assumes that one parent is pursuing evening courses at a local community college. The younger child attends full-time daycare, while the older child is enrolled in before- and after-school care.

The living wage methodology assumes that employers provide the statutory minimums for time off and that parents in the reference family take vacation during the year. In New Brunswick, full-time employees are entitled to two weeks of paid vacation annually, in addition to paid statutory holidays.[4] However, employers are not required to provide paid sick leave. This gap in workplace protections can put working parents and caregivers in difficult situations, sometimes forcing them to choose between their job responsibilities and their family's needs. Without paid sick days or flexible work arrangements, a worker may have to forgo income to care for a sick child or seek alternative child care when schools are closed for non-statutory holidays, professional development days, or winter, spring, and summer breaks.

LIMITATIONS

While the living wage methodology is a valuable tool, it does have limitations. It is based on the costs faced by a specific reference family, and therefore does not account for individuals who are unable to work full-time or for households with different family structures and compositions. As a result, the calculated

living wage may fall short for families with more complex or demanding financial needs. This includes couples with more than two children, families with very young children who require more intensive and costly child care, or single-income households supporting multiple dependents.

LIVING WAGE BUDGET

The living wage is a conservative estimate of the income needed to meet basic needs in a specific community or region. Based on a household budget covering ten core expense categories (detailed in this section), it reflects what families need not just to survive, but to live well and participate fully in their communities. It emphasizes that true financial security requires more than covering essentials. It also demands stability, opportunity, and flexibility.

The budget *does not* include credit card or loan payments, retirement savings, life insurance, homeownership expenses, and the additional costs of caring for a child or adult family member with a disability or serious medical condition.[5]

Family expenses are calculated using the Market Basket Measure (MBM), along with local data from independent cost surveys.[6] The MBM is Canada's Official Poverty Line. It reflects the cost of a specific basket of goods

and services needed by a reference family of two adults and two children to maintain a modest standard of living.[7] The MBM is used to inform several key living wage expense categories, including food, clothing and footwear, transportation, household expenses, and social inclusion.

For the purposes of our calculations, the MBM's "Other Necessities" category was divided into two distinct components in the reference family's budget: "Household Expenses" and "Social Inclusion."

The MBM is currently undergoing a third comprehensive review, which is expected to be completed this fall.[8] The base MBM figures used in New Brunswick's living wage calculations are drawn from the second comprehensive review, completed in 2018.[9] For our analysis, these figures were adjusted for inflation using the Consumer Price Index (CPI).

The living wage budget includes the following monthly expense categories:

Child Care: This budget item includes the cost of full-time, full-year care for the 2-year-old and before- and after-school care for the 7-year-old. It also includes additional fees, if applicable, for the older child’s full-time care during March, summer and winter breaks, Professional Development days, snow days, and non-statutory holidays. An independent cost survey provided the basis for estimating the cost of care for the 7-year-old. The toddler child care rates come from Statistics Canada's Canadian Survey on the Provision of Child Care Services and insights from a report on child care coverage from the Canadian Centre for Policy Alternatives.[10, 11] Our calculations do not include the \$10-per-day child care rate, as this option remains out of reach for many families.

For the toddler's child care costs, we draw on Statistics Canada data for both licensed and unlicensed care.[12, 13] These data sources show that recent investments in child care and early learning have reduced fees for toddlers. To estimate what families typically pay, our calculations are based on the average costs across licensed and unlicensed, home-based and centre-based child care facilities.

New Brunswick has exceeded its commitments for child care space creation, producing 47 percent more spaces than promised and surpassing its 2025–2026 goal by the first quarter of 2025.[14] The province has also increased the proportion of children living at or above the federal target for child care access by roughly 10 percentage points. [15] However, even with these gains, New Brunswick’s coverage rate remains below 5.9 spaces per 10 children, leaving many families without access. Though fees were reduced by 50 per cent by the end of 2022 and the province is committed to implementing \$10-a-day care by 2026 under the Canada–New Brunswick Early Learning and Child Care agreement, further expansion is required to ensure quality child care services are both affordable and available to all families.[16]

Clothing & Footwear: These costs are sourced from the MBM and adjusted for inflation using the CPI. This budget category includes apparel for school, work, and leisure for the MBM’s reference family.

Contingency/Emergency: This modest allowance covers unexpected expenses and is equivalent to two weeks' pay per parent per year. It represents a small portion of the overall household budget.

Food: These costs are based on the MBM food budget and adjusted for inflation using the CPI. This amount is derived from Health Canada's National Nutritious Food Basket, which aligns with Canada's Food Guide. [17] The MBM food budget is modest and does not account for special dietary needs, eating out, or cultural and personal food preferences.

Health Care: This reflects the cost of a basic private health insurance plan that covers services not included under Medicare, such as vision care, and prescription drugs. It does not include coverage for mental health services. The budget provides a modest estimate for household health expenses and would be insufficient for families facing high medical costs, including those related to medical equipment, specialized medications, or the additional expenses of living with a disability or serious health condition.

In 2025, the Government of Canada fully implemented the Canadian Dental Care Plan (CDCP). Consequently, the basic private health insurance package for the living wage reference family no longer includes dental coverage. Since the reference family meets the eligibility criteria for the CDCP, they are now covered under the public plan and no longer need to purchase private dental insurance.

Household Expenses: This category includes essential household items such as toiletries, personal care products, cleaning supplies, laundry necessities, furniture, small kitchen appliances and tools, bank fees, and basic cell phone service.

Parent Education: The family budget includes the cost of part-time studies for one parent at a community college (NBCC). It covers two semester-long courses per school year, part-time student fees, and a small textbook allowance. It is assumed that the parent is enrolled in a full-time program leading to accreditation, but is taking a reduced course load of one class per semester.

Shelter: This category includes the cost of renting a three-bedroom dwelling, basic contents insurance, utilities, and Internet service. The rent amount is based on Canada Mortgage and Housing Corporation's (CMHC) average rents for three-bedroom apartments and row houses, as reported in its October 2024 rental market survey.[18] We used average rather than median rent data, as average rents better reflect the market rates for available units. These figures were then adjusted for inflation using the CPI.

Utility costs are estimated using the average household expenditures on electricity within each respective community. The estimates are based on data for couple families with children living in three-bedroom apartments, as reported in the 2021 Census of Population.[19] These data were obtained through a custom tabulation produced by Statistics Canada for the Community Data Program.[20] To reflect current costs, the 2021 figures were adjusted for inflation using the average Consumer Price Index (CPI) for “electricity” from January to June 2025.

Internet costs are drawn from an independent survey of the most affordable monthly plan offering at least 50 megabits per second (Mbps) download and 10 Mbps upload speeds, as well as installation fees.

Focus group participants from previous years raised concerns that the rent figures used in living wage calculations did not reflect current housing conditions. This caution remains relevant. CMHC data does not fully capture the impacts of recent rent spikes and extremely low vacancy rates. While some families may be paying rents consistent with the averages used here, newly arriving families or those relocating within a city would likely struggle to find a three-bedroom unit at that price.

Social Inclusion: This component supports the reference family’s ability to participate meaningfully in community life. While poverty often carries social stigma and restricts opportunities for connection, engagement, and enjoyment, the social inclusion allowance is designed to do the opposite. It promotes equity, inclusion, and a sense of belonging by recognizing that financial security means more than meeting basic needs. It also includes the freedom to enjoy life's extras. This allowance can be used for expenses like school supplies and fees, recreational and sports activities, art classes, day trips, occasional restaurant meals, and gifts for birthdays or other holidays.

Transportation: This category includes the costs of maintaining a secondhand vehicle [21], purchasing 12 monthly bus passes, and taking 48 taxi trips of 10 kilometers each for the full year. It reflects a practical budget for a family with two working parents, one of whom is also attending college part-time, and children in school and day care. The allowance supports efficient commuting and helps the family maximize time together at home.

COMMUNITY COMPARISONS

Living wage rates have increased across all jurisdictions over the past year, reflecting inflation and the ongoing high cost of living. Shelter, food, and child care remain the largest expenses for reference families, together accounting for more than half of the household budget. This pattern is consistent with findings from previous years of New Brunswick’s living wage research.

Shelter costs are soaring, putting added pressure on families struggling to meet basic needs. Between June 2024 and June 2025, rent in New Brunswick rose by 7.9%, outpacing the national rate of 4.7%.[22] Food costs have also increased though not as much as rent.

For families, shelter is a fixed, unavoidable expense, while food, for example, is more flexible. When household income is limited, this imbalance forces households into difficult trade-offs, such as choosing between paying rent on time or buying groceries. A living wage is essential to ensure families can keep pace with living costs and meet their basic needs.

While rent costs increased the most, the impact of the increase on the living wage was tempered by a reduction in certain costs. The introduction of the Canada Dental Care Plan eliminated the need for families to purchase private dental insurance. This was also the first year that high-quality data were available to account for the government’s reduction in child care fees which lowered family expenses. In addition, improvements to part-time tuition rates at New Brunswick Community College reduced education costs, and a decrease in the federal marginal tax rate for the lowest income bracket provided minor relief to household budgets.

Saint John experienced the largest year-over-year living wage increase among the three cities. Of the family expenses, shelter costs contributed most to the increase. Saint John's shelter costs increased more than in Fredericton and Moncton. Fredericton continues to have the highest living wage overall, also driven by comparatively high shelter costs.

Table I: Living Wage Comparison

Geography	N.B.	Fredericton	Moncton	Saint John

Total	\$84,631.31	\$87,203.97	\$84,070.93	\$84,230.49

TAXES AND TRANSFERS

The living wage methodology takes into account both taxes and government transfers. Reference families received the Canada Child Benefit (CCB) and the Canada Carbon Rebate (CCR) until the CCR ended in April 2025.[23] Reference families in Moncton and Saint John also qualified for the New Brunswick Harmonized Sales Tax Credit (NBHSTC), while those in Fredericton and New Brunswick overall did not.

None of the reference families received the New Brunswick Child Tax Benefit (NBCTB), the New Brunswick Working Income Supplement (NBWIS), or the federal Goods and Services Tax (GST) credit, as their incomes were above the eligibility thresholds.[24, 25] As household employment income rises, the level of government support decreases. With living costs continuing to climb, the living wage will rise accordingly.

Table IV: Annual Government Transfers:
New Brunswick, Fredericton, Moncton, and Saint John

Transfers	N.B.	Fredericton	Moncton	Saint John
NBCTB	\$0.00	\$0.00	\$0.00	\$0.00
NBWIS	\$0.00	\$0.00	\$0.00	\$0.00
CCB (Jan-June)	\$4,498.63	\$4,256.13	\$4,633.09	\$4,633.09
CCB (July-Dec)	\$4,759.12	\$4,451.09	\$4,893.58	\$4,893.58
GST Credit	\$0.00	\$0.00	\$0.00	\$0.00
NBHSTC	\$0.00	\$0.00	\$15.77	\$15.77
CCR	\$520.00	\$520.00	\$520.00	\$520.00

LOW-WAGE WORKERS

Low-wage workers are those who earn less than the 2024 provincial living wage. Using data from the *Labour Force Survey*, an estimated 45% of workers in New Brunswick earned less than a living wage last year.[26] This means that nearly half of all employed people in the province were paid less than what is needed to maintain a decent standard of living.

Who are low wage workers?

These statistics challenge common assumptions about low-wage work. The majority of low wage workers are not students. They are adults, aged 20 or older, often working full-time in permanent roles, and frequently employed by large companies. Low-wage employment is not confined to temporary, seasonal, or entry-level jobs. Low wage work is a prominent feature of New Brunswick's labour market, affecting almost one in two workers.

89% aged 15 to 64 are not students.

89% are 20 or older.

53% are Women+.

82% are permanent employees.

55% work at firms with 100+ employees.

75% are full-time employees.

BENEFITS OF A LIVING WAGE

A living wage benefits employees, their families, employers, and communities. It ensures adequate income to cover typical family living expenses. It lifts individuals and families from poverty, increases economic security, and reduces financial stress.[27] It also supports physical and mental well-being, and is associated with lower rates of absenteeism and job turnover.[28] Employers may see gains in worker productivity, efficiency, morale, and job satisfaction.[29] It can improve recruitment and retention, which reduces hiring costs and increases workforce stability.[30]

A living wage fosters social inclusion, a sense of belonging, and an overall improved quality of life. Additionally, it supports healthy child growth and development, which is a key factor in well-being across the lifespan.[31]

A living wage helps address poverty and systemic inequalities, particularly for women, racialized workers, newcomers, and additional historically marginalized groups who are disproportionately represented in low-wage work.[32] These workers often face barriers to fair compensation due to discrimination, precarious employment, and limited access to advancement opportunities.[33] Paying a living wage helps close income gaps, supports economic inclusion, and affirms the right of all workers to earn enough to live with dignity and security.[34]

At the community level, a living wage enhances consumer purchasing power and contributes to local economic growth.[35] Paying a living wage is a clear demonstration that employers value their employees and their contributions. It is also a long-term investment in a healthier, more resilient economy and society.

While the living wage is calculated using a reference family model, its benefits extend to all workers, not just those with dependents. For single individuals, earning a living wage can mean the difference between merely getting by and building a life with dignity and purpose. It enables them to meet basic needs, pursue higher education or career development opportunities, and actively participate in their communities. Just as important, it offers the possibility of a more secure future, whether that means starting a family, affording stable housing, or having the means to save for long-term goals. A living wage is not just about meeting today's costs; it is about creating the conditions for people to thrive, grow, and build meaningful lives.

LIVING WAGE POLICY AND EMPLOYER CERTIFICATION

Several provinces, including Ontario, Alberta, and British Columbia, have implemented official living wage employer certification programs, typically administered by non-profit organizations. These programs allow businesses to receive public recognition for their commitment to paying wages that meet the cost of living in their region. In contrast, no formal certification programs currently exist in the Atlantic provinces. However, advocacy efforts led by organizations such as the Human Development Council and the Canadian Centre for Policy Alternatives-Nova Scotia are pushing for change. Living wage policy advocacy is underway and progress will be highlighted in future reports.

Living wage certification is a relevant and important policy issue across all levels of government. At the federal level, it offers a strategy to address working poverty, reduce reliance on income support programs, and set wage standards within federally regulated industries. Provincial governments play a key role by authorizing and supporting certification programs, thereby expanding their reach and credibility. Municipalities can adopt living wage policies for their own employees and contractors, directly improving wages and working conditions within their jurisdictions. By leading through example, they set a strong precedent for other employers in the community to follow.

In recent years, a growing number of municipalities across Canada have become certified Living Wage Employers, committed to paying the living wage in their area. These policies not only improve the lives of workers but also strengthen local economies and promote social equity.

New Westminster, British Columbia, became the first municipal Living Wage Employer in Canada on January 1, 2011.[36] Since then, dozens of municipalities from coast to coast have followed suit.

Notably, in October 2020, the Halifax Regional Municipality's Regional Council approved a policy to pay a living wage to most contract workers delivering municipal services.[37] This commitment reflects a growing recognition that fair wages are essential to help workers cope with rising living costs and to eliminate working poverty.

Now is the time for municipalities in New Brunswick to take similar action. The benefits of living wage policy are clear, and the need is urgent. We cannot afford to wait.

CONCLUSION

Living wages in New Brunswick have reached their highest levels since we began calculating them in 2018. Without increases in government transfers and benefit programs for working families, the living wage will continue to increase as the cost of living climbs. The overall cost of living goes up with increases in inflation. This report shows shelter expenses increased most in the last year. Households need higher living wages to keep up with these and other costs.

While encouraging employers to voluntarily pay a living wage is important, it cannot replace the need to raise the minimum wage. The current gap between the minimum wage and the living wage highlights that workers earning \$15.65 per hour struggle to meet basic needs, let alone additional living costs.

Raising the minimum wage is a critical step toward putting more money into the pockets of New Brunswickers.

Moreover, easing financial pressure on households requires public investment in essential services, such as expanding affordable housing and increasing access to low-cost, quality child care. Indexing all government transfers to inflation is also vital to protect the purchasing power of New Brunswickers.

These policies go beyond helping those who are working. They can help ensure that everyone, regardless of work status, can live with dignity as fully participating members of our communities.

ACKNOWLEDGMENTS

We thank the Economic and Social Inclusion Corporation (ESIC) for supporting this research.

We are grateful to Chelsea Driscoll for her valuable contributions to the living wage calculations, particularly her analysis of inflation and the effects of government transfers.

We also thank the Living Wage Canada Network for their collaboration in calculating living wages across the country and for their

guidance in applying the Living Wage Canada framework, ensuring our methodology aligns with national standards.

Special thanks to Christine Saulnier and Daniel Cerdas Sandi of the Canadian Centre for Policy Alternatives - Nova Scotia. As lead researchers on living wages in Nova Scotia, Prince Edward Island, and Newfoundland and Labrador, their partnership was instrumental in aligning our methodology and calculations for New Brunswick.
